Bigfoot Field Guide

VOLUME I, ISSUE I

Who is the MABRC?

The Mid-America Bigfoot Research Center has constantly sought ways to share research information with other researchers, and now, we have our own newsletter.

With the Bigfoot Field Guide Television and Radio networks, along with the forum, website and the Bigfoot Research Online Training Facility, MABRC continues leading the way.

Who do we share our information with? Everyone, we post it in the open for others to see.

Why, because only be sharing information, and not holding back, can we cooperate and solve the overall mystery of Bigfoot.

Started in 2003 as the Green Country Bigfoot Research Center, we have evolved into the MABRC in early 2007, in which we now have over 70 research-

The MABRC Logo

ers and analysts in the group, from over 20 researchers, 4 countries, and 3 Continents.

We are always interested in new members and our goal is to

someday be the biggest and best Bigfoot Research group in the world. With over 70 in the group and growing everyday, that is a very possible vision.

FEBRUARY 2008

You can visit us at any of our sites:

The Forum

The Website

The Online Training Facility

And you can find the Bigfoot Field Guide Television listed on <u>YouTube</u>, while the Radio show is listed on <u>Talkshoe</u>.

What is.....?

4x4 mode.

4x4 mode is when a Bigfoot actually gets down on all fours and travels that way for any distance. This usually occurs when sneaking up on prey, sneaking up on humans to get a better look, or when crossing a big area where concealment and foliage does not cover their movements.

This is similar to what 4x4 looks like.

When the Bigfoot gets into 4x4 mode, the mid-tarsal break actu-

ally hinges up the rear part of the foot. Effectively making the rear track look similar to a bear's. They use their hands by bending their fingers underneath their hands, and extending the thumb out for extra balance.

While not generally accepted by the Old School folks, 4x4 mode is seen quite a lot in Oklahoma and other southern states.

January 2008 Expedition

The MABRC conducted an expedition on January 25th-27th, 2008 in Adair County, Oklahoma and had quite a turn –out. We had GSMom, Nugget, No Mercy, Grizlyadams, SensorTech, BayouDan, ElectricBigfoot and Darkwinglh.

For three days, the crew endured freezing temperatures and scoured the area for any evidence that could be found.

Stick structures, footprints, vocalizations and other evidence was found, and what made the expedition worth it was the multiple-witness sighting of a Bigfoot. This occurred the last night of the expedition and got the witnesses really excited.

For more details, go to the following thread at the MABRC Forum.

January 2008 Expedition

Largest Sighting Database online..

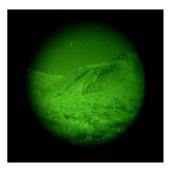

The MABRC folks are busy putting together the largest, searchable sightings database ever constructed.

We've merged the online databases of all the major groups into one central location, and to further help researchers and analysts, we have put online tools on our forum to help them show percentages of everything from the weather to hair color and even the time of day.

This is perhaps the best research tool available anywhere for researchers, as it can show trends for your area, and even nationwide.

To view this database, go to the following link:

OSSIE Database.

Honobia Bigfoot Conference 2008

The MABRC is proud to host the 2008 Honobia Bigfoot Conference, Oct. 3rd-4th. It gives us great pleasure to announce as

the keynote speaker, Dr. Jeff Meldrum.

Join us at the confer-

ence and the Festival as researchers talk about their research and evidence, show off the equipment they use, and just meet and greet with the public.

The MABRC is shooting for at least 40 of their researchers and analysts to be at the conference in a show of support from the Bigfoot Community.

Other groups are invited to show and have booths, do presentations and meet the public.

For more information, contact <u>darkwingh@alltel.net</u> or visit the <u>MABRC Forum</u>.

Tips and Tricks

The success you enjoy with using bait depends on a number of factors that the researcher should be aware of.

Always use organically grown fruit and vegetables.

Always wear rubber gloves when setting out the bait, so that human scent does not get on the bait.

Place the bait in a clear, open area

Click the internet that I may picture to have not been so go to foolish in what I Dragonrr's thought, was consid-Research ered "make belief" in Thread. the real world.

bait, there are quite a few things to remember to be successful in luring in a **Bigfoot**"

"When using

that can be spotted easily.

If using fish, place it on a line about 5 to 6 feet high.

If using meat, let it sit out for several days, to get a rancid smell to it. This seems to attract the Bigfoot quicker.

Use baits that will attract their curiosity, like toy pinwheels, cyalume glow sticks, neon colored

Bigfoot Field Guide Television

The MABRC has created their own television show, that has produced quite a few good segments.

There are several productions ongoing that covers the expeditions that the MABRC are conducting this year.

To view the episodes, you can go to the **BFGTV** YouTube site, or go to the Movie Theater area of the

forum at Movie Theater, where you can actually view other video clips that have been found around the Internet.

Where Researchers think outside the box!!

In 2003, Green Country Bigfoot Research Center was created to give Northeast Oklahoma it's own full-time research organization. The research thrived and eventually in 2006, the GCBRC changed it's name to Mid-America Bigfoot Research Center, and now boasts over 70 researchers and analysts from 20 different states, 3 countries and 2 continents.

The MABRC is noted for their thinking outside the box attitude, where new things are tried daily in the research of North America's largest primate.

Frequently asked questions.....

In future newsletters, we will answer questions here from our readers and even from those asked on our forums.

To send in a question to be asked here and answered by the MABRC, email darkwinglh@alltel.net and title the e-mail Newsletter FAQ.

If you wish to subscribe to this newsletter, send an e-mail titled subscription to darkwinglh@alltel.net .
